# MYSTERY PICTURE HUNT

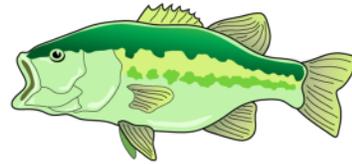

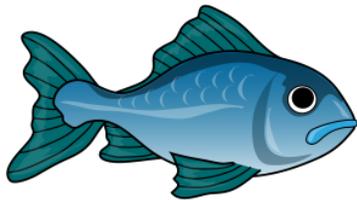

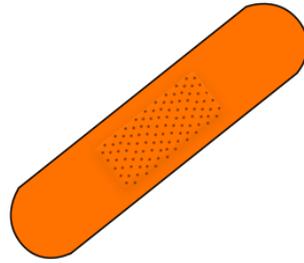

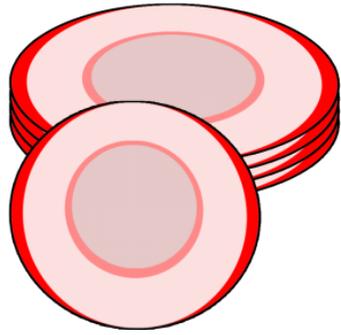

- My therapy kids always liked to play this when we had some time after a book or unit.
- Print and laminate the pictures. Cut out the stimuli picture squares.
- Put the squares in a bag or hat.
- Students take turns picking a picture. Tell them to be careful no one sees what it is
- They have to give directions so the others can find the item they picked.
- They cannot name it.
- What they can do depends upon what you are targeting:
  - If they need to give spatial directions, either single or two-step: i.e. It is under the car and next to the hamburger, or It is in the lower left corner next to the apple.
  - If they need to describe/define it: i.e. It is something that is made of wool that you wear on your head in the winter.
- Since it isn't a game board there is less pressure to have enough time to "finish." If not everyone in the group gets a turn today, keep track of who didn't and start with them next time.
- Have fun.

- This was originally posted as a free item in 2012. It has been updated 11-2014 with all new images from Smarty Symbols (all rights reserved).
- The images are clearer and crisper.
